

~~Means for orientation of paint brushes of continuous handle component to Isokinetic optimization of coverage, line-of-sight and hand spacing~~

2. The painting tool as in claim 1 wherein the affixing of the common paint brush is not obstructive to the line-of-sight.
3. the painting tool as in claim 1 wherein the nested end is contoured to receive specific common brush handle shapes.
4. The painting tool comprising: A hollow tubular lightweight member sufficient to allow spaced 2-hand gripping formed at one end to nest and contain common paint brush handles, being oriented by the hole of the common paint brush handle and being compressively contained by the flexible characteristic of the tube material compressed by the tension band.
5. The painting tool comprising an embodiment of bristle, bristle encapsulation, and handle of sufficient length to allow spaced 2-hand gripping.
6. A paint tool as in claim 5 with fixed angle approximately defined by the line-of-sight from eye to cut line (leg 1) from hand(s) to cut line (leg 2).
